

## Getting Started with IT Asset Management

A total IT asset management solution is broad-based and can include everything from acquisition through disposition. The more services integrated into a solution, the better.

How are you currently managing your IT asset base?

We acquire technology:

- from a single source
- from multiple sources
- we buy outright
- we lease
- short term rentals

We image and deploy assets:

- using internal IT staff
- using manufacturer or reseller staff
- using a 3<sup>rd</sup> party service provider

We inventory and track asset movement:

- via vendor-supplied online portal
- via reports requested from vendors
- via other electronic means
- manually
- we don't track our assets

We manage and track manufacturer warranties and extended maintenance agreements:

- Yes, via an online portal
- using internal legacy systems
- we don't track and hope for the best

We manage software license agreements:

- using an online portal
- using other discovery systems
- we don't track licenses
- we just keep buying more

We manage disposal of retiring assets by:

- returning assets to leasing company
- third party retrieves and disposes
- data is wiped at vendor's site
- packing and shipping provided by vendor
- pile them up until forced to do something

Not managing your assets optimally at present? Let us help you reduce your total cost of ownership and simplify the lifecycle support. Whether you purchase or lease, we can customize a solution that meets your needs.
